

Provider Dental Toolkit

Driscoll Health Plan's Provider Dental Toolkit is created specifically to support doctors in discussing dental care during checkups. Providers have access to valuable resources such as downloadable materials, interactive tools, and educational resources conveniently located on our website.

Community Connection Centers for Families in Need

Our Community Connection Centers are here to support your patients and their families. Upon qualification, families can visit their nearest location to receive essential goods at no cost.

Eligibility criteria include:

- Pregnant women
- Families with children under 18 years of age
- Families with children with disabilities under 20 years of age

Nulliparous Term Singleton Vertex Cesarean Section (NTSV) Toolkit

Driscoll Health Plan is driving change in maternal health with our new evidence-based toolkit to reduce the rate of Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Sections; commonly referred to as Primary C-Sections. The toolkit includes best practices, strategies, and resources needed to create a culture of change to reduce risks for members.

This is done by identifying obstacles, provide opportunities for change, defining as well as refining policy, identifying educational needs, supporting vaginal birth, conducting a data analysis to implement quality improvement change, considering Alternative Payment Models (APMs), and considering laborist models.

Clinical Practice Guidelines

We have updated our Clinical Practice Guidelines, which includes new recommendations for Chlamydia Screening in Women. You can access the revised document on our website and through the Provider Portal.
